

Description:

The LZ-4 gun selector switch allows the user to attach 4 stud welding guns to a single power supply.

This saves substantial set-up time when different weld studs are needed to be welded quickly on the same part.

This system utilizes a programmable logic controller (PLC) which recognizes the gun the operator is using, automatically disables the other guns and safely welds with the gun that has been selected. Most IWT guns are compatible with the LZ-4 including IWT-C1, IWT-C2, IWT-M1 and IWT-S1 contact guns. The LZ-4 is not suitable for use with the IWT-G1 gap gun.

The LZ-4 can also be easily programed to work with either IWT LYNX capacitor discharge or Fusion drawn arc systems

Weight/Dimensions:

18lbs
15.5"D x 6.5"H x 13"W

Power Requirements:

110 VAC

Features:

- Quickly Select Between up to 4 Guns
- Compatible with C.D. and Arc Guns
- LED Indicator
- High Current Switching
- Simple Operation
- Stackable with LYNX Stud Welders

Switchbox & Titan
